# A company you can count on...

## About Us

**Our customers trust us to deliver the right product at the right time, on time, every time.**

**Our business is based on a tradition of service, aiming to be your first choice supplier of non-ferrous metals, plastics and fasteners.**

**Durbin Metals combines the strengths of a large business with the friendly, flexible customer-service oriented approach of a local family business.**

As a business committed to family values, we have built a focused team that puts customer needs first. This service culture is fundamental to the strength of the relationship between our staff and customers - they trust us to deliver the right product at the right time, on time, every time, supported by the right advice and service.

Our values remain as true today as they did when Durbin Metal Industries was established, embodied in a philosophy of total commitment to customer service and customer care, backed by a comprehensive stock range with a team of people who share these values.

Developing strong partnership with our customers has always been one of our guiding principles, working with them to achieve mutual profit and continued success. The continued loyalty of our customers is testimony to our ability to consistently meet that demand. But we do not take this responsibility lightly and consistently seek ways to improve our service.

We are proud of everything Durbin Metals stands for in our industry.

## Our History

The business was formed by the Durbin family in 1982 and started supplying customers in the local area, gradually expanding the territory covered to span the whole of the South West and Midlands regions.

In 1997, we relocated to extensive new premises in Yate, which enabled us to invest in a truly outstanding stock range and to offer an even more impressive service at a competitive price.

In 1998 we opened the Aluminium Plate Centre, with the majority of products being available cut to size on a next day service.

Our transport fleet has grown to offer an unparalleled level of service throughout the South West and Midlands regions on a daily basis.

The latest chapter in our history and the most exciting yet is joining the Amari family of companies. With access to the UK's largest stock of Aluminium, Stainless Steel Copper, Brass, Bronze and Plastics as well as the financial strength and purchasing power of one of Europe's leading metals distributors we are now pushing forward with our next phase of business development.

## Aluminium Plate Centre (see page 8)

Our Aluminium Plate Centre, located in Walsall, West Midlands holds over 200 tonnes of stock in two main grades – 6082 T6/T651 and 5083 O/H111. Full plates and cut pieces are available for next day delivery.

Three plate saws with capacity up to 4m long and 152mm thick maintain a tolerance of + or 1 0.2mm.

In addition we have a specialist saw dedicated to cutting circles and rings.

### Disclaimer

The information contained herein is based on our present knowledge and experience and is given in good faith. However no liability will be accepted by the Company in respect of any action taken by any third party in reliance thereon.

As the products used herein may be used for a wide variety of purposes and as the Company has no control over their use, the Company specifically excludes all conditions and warranties expressed or implied by statute or otherwise as to dimensions, properties and/or their fitness for any particular purpose. Any advice given by the Company to any third party is given for that party's assistance only and without any liability on the part of the Company.

Any contract between the Company and a customer will be subject to the Company's Conditions of Sale. The extent of the Company's liabilities to any customer is clearly set out in these Conditions; a copy of which is available on request.

### Weights

All weights shown in this publication are for guidance only. They are calculated using nominal dimensions and scientifically recognised densities. Please note that in practice, the actual weight can vary significantly from theoretical weight due to variations in manufacturing tolerances and compositions.
